COVID-19 Cases and Vaccination Progress Report

Data Import and Transformation:

- Step 1 : Import all three data files into Power BI
- Step 2 : Cleaning the data using Power Query like (Remove the duplicate data , find the missing data and replace the average value and check the date format conversions).
- Step 3 : Merge datasets based on common fields Date and State.

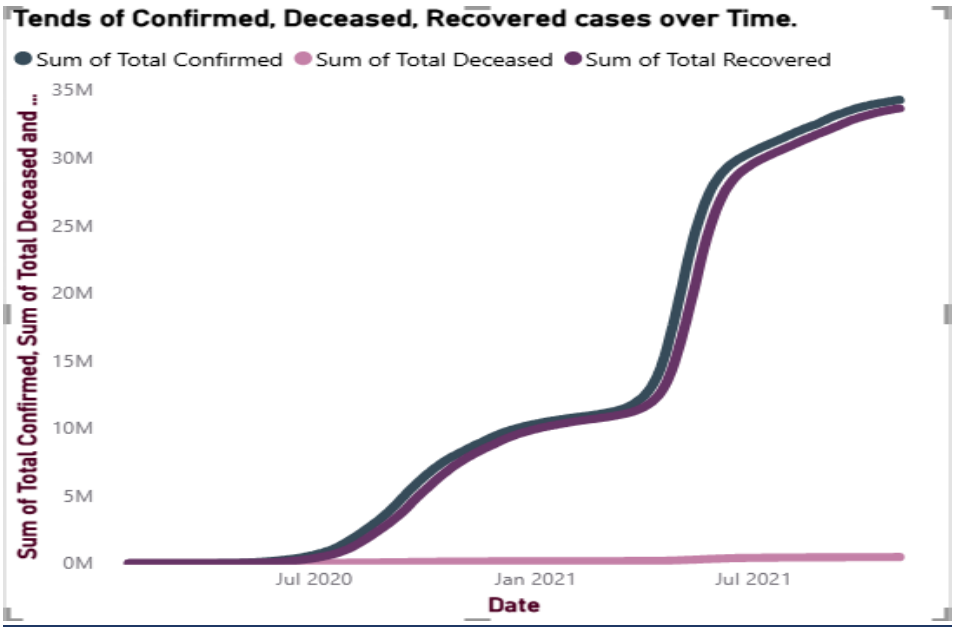
Data Model:

- Create the relationship between the three tables using date and state field.
- To Ensure the model is optimized for analysis.

Dashboard Creation:

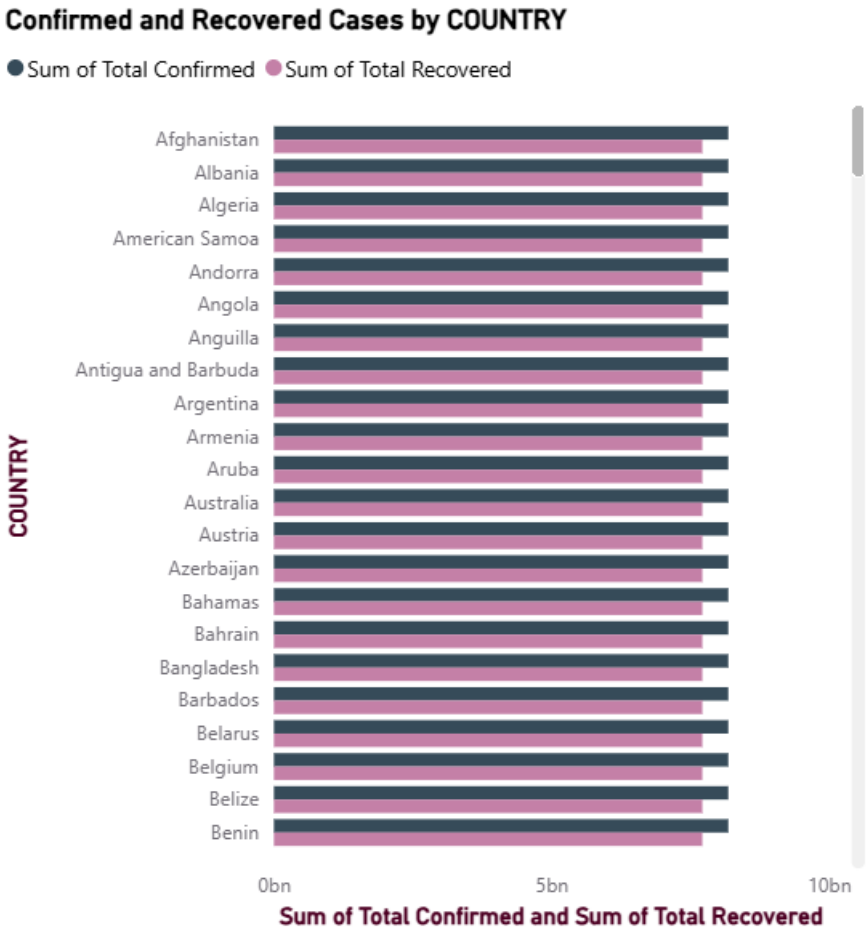
Visualizations:

Line Chart:



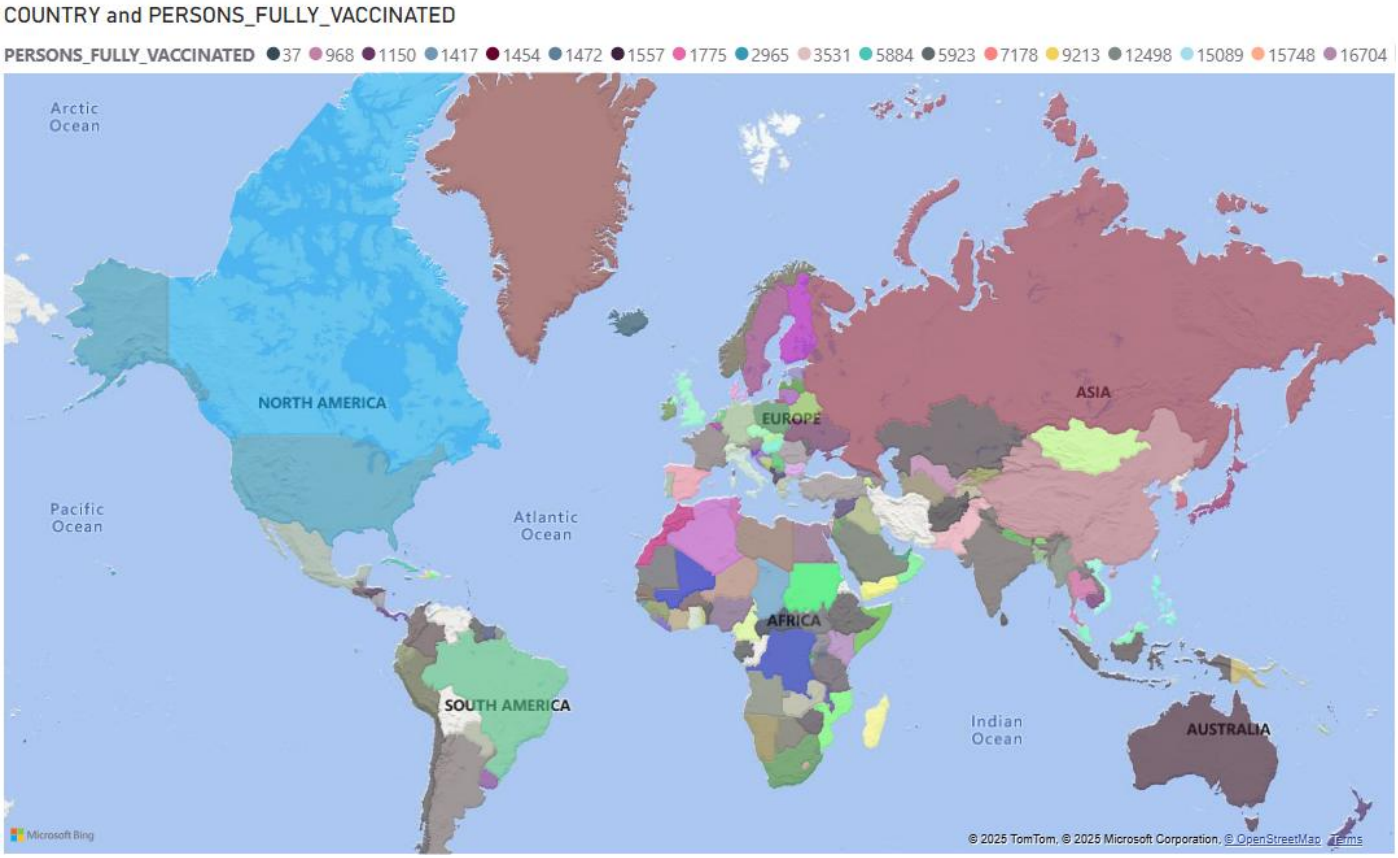
- Line chart shows the trends of confirmed, recovered, and deceased cases over time.
- Here the line chart shows confirmed cases more than recovered and deceased cases.

Bar Chart:



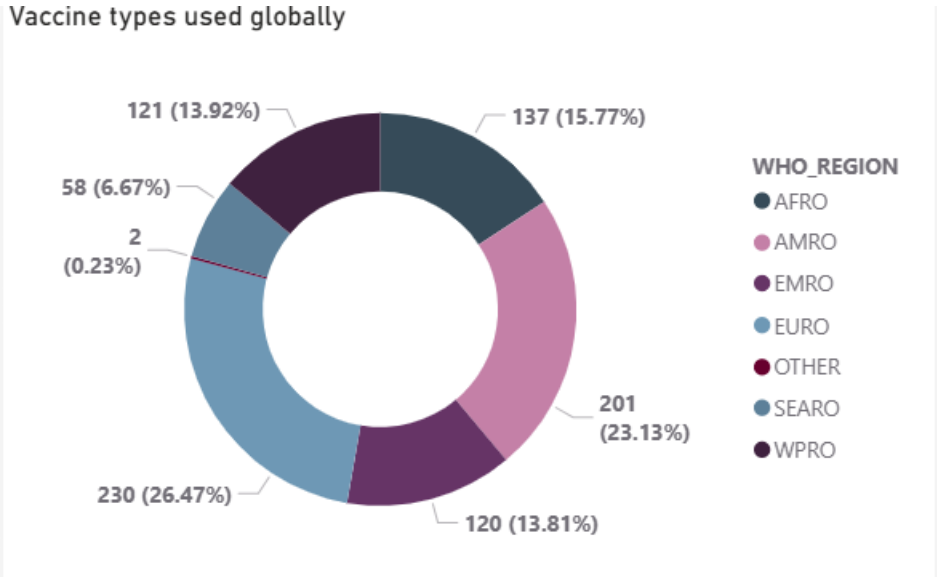
- Here bar chart shows the all Confirmed and recovered cases by country wise

Map Visualization:



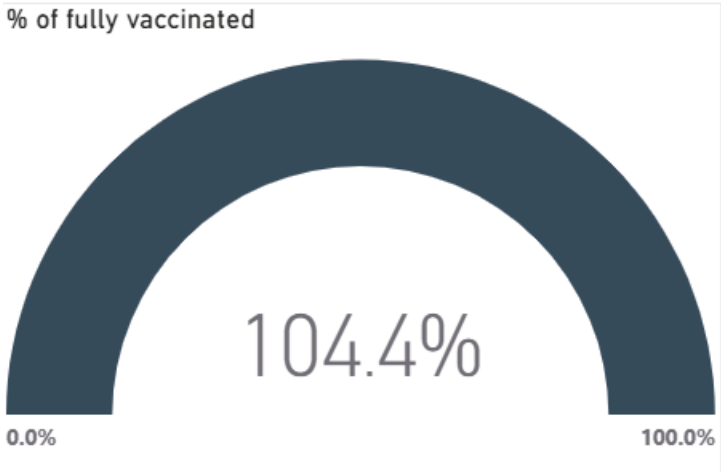
- Here the map Visual shows the a Total number of people fully vaccinated by country.
- China has the highest number of fully vaccinated people compared to other countries.

Donut Chart:



- The Donut chart shows the vaccine types used by globally
- EURO Region highest no. of vaccination types used.

Donut Chart:



- Here shows the gauge chart percentage of persons fully vaccinated.

KPIs (Key Performance Indicators):

- **Total Confirmed Cases:** Sum of confirmed cases.
- **Total Recoveries:** Sum of recovered cases.
- **Total Deaths:** Sum of deceased cases.
- **Total Vaccinations Administered Globally:** Sum of vaccinations administered globally.
- **Fully Vaccinated Population Percentage:** Percentage of fully vaccinated people globally and by country.
